

Animal Health and Welfare: Activities of the International Dairy Federation

11 years of successful collaboration with the OIE

**Nico van Belzen, PhD
IDF Director General**

81st OIE General Session, Paris, 26-31 May 2013

INTERNATIONAL DAIRY FEDERATION

MISSION:

**IDF represents the global dairy sector
and ensures
the best scientific expertise is used to
support high quality milk and nutritious, safe
and sustainable dairy products**

IDF FACTS AND FIGURES

- Founded in 1903
- Over 75% of world milk production
- 1200 experts
- 18 Standing Committees and Task Forces
- First private agri-food sector organisation with a formal collaboration with the OIE (2002)

ANIMAL HEALTH AND WELFARE IS KEY FOR SUSTAINABLE MILK PRODUCTION

- **Animal diseases with high economic impact**
(Paratuberculosis, Foot-and-Mouth Disease, Mastitis, ...)
- **Zoonoses** (Brucellosis and Bovine Tuberculosis)
- **Vector-borne infectious diseases**
(Bluetongue and Rift Valley Fever)
- **Increasing consumer expectations regarding animal welfare**

IDF Standing Committee on Animal Health and Welfare

79 experts from
28 IDF member
countries, and

Multilingual guidance

SUGGESTED INTERPRETATION OF MASTITIS TERMINOLOGY

(revision of Bulletin of IDF N° 338/1999)

barrier teat dip	Product formulated with a component that forms a physical barrier on the outside of the teat to protect the teat from contamination between milkings or in the dry period.
bedding	Material used to aid in comfort and cleanliness when the animals are lying down. Material may be organic (e.g. straw, sawdust, or recycled manure) or inorganic (sand).
beta-hemolysis (US); beta-haemolysis (UK)	Clear zone of lysed erythrocytes surrounding colonies of some streptococcal species growing on blood agar. The word is also jargon adopted by mastitis diagnosticians to describe a zone of incomplete or partial hemolysis of red blood cells (due to beta-hemolysin) surrounding colonies of <i>Staphylococcus aureus</i> growing on blood agar. Compare alpha-hemolysis .

Antimicrobial Resistance

IDF Factsheet – February 2012

- Prudent use of antibiotics is a vital component in disease control and assuring milk quality in most successful dairy management schemes
- After four decades of antimicrobial drug use in dairy cows, no apparent progression of antimicrobial resistance in mastitis
- IDF will continue to monitor and report new research results, and would propose appropriate and coordinated responses if an emergence of antimicrobial resistance among mastitis pathogens would be confirmed

IDF's AHW PRIORITIES 2013/2014

- Monitoring of and input to
 - OIE Animal Welfare work on dairy cattle
 - ISO work on animal welfare standards
- IDF Guide to Good Animal Health in the Dairy Sector with OIE involvement
- Guidelines for the use and interpretation of bovine somatic cell counts in the dairy industry
- Monitoring and reporting of dairy animal health issues in IDF member countries

SHARING GLOBAL EXPERTISE IN DAIRY

IDF World Dairy Summit 2013 **Rediscovering Milk**
